

Productivity Flow for Entrepreneurs

An EWOR Checklist

Creating a pre-deep work checklist is an excellent way to maximise your productivity by organising everything you need and sharpening your focus **to truly get into the flow of your deep work session.**

To begin, we recommend preparing your:

Physical environment

A clean office environment has been shown to improve concentration and help you enter a flow state.

- Start by keeping your desk tidy and ensuring you feel prepared to work.
- Natural daylight is also essential—if your space lacks natural light, consider using a daylight lamp.
- Lastly, maintaining a quiet atmosphere is crucial. If your surroundings are noisy, invest in noise-cancelling headphones or earplugs to create a more focused workspace.

Mental environment

Ensure your mind is organised before starting work.

- Keep a to-do list handy to jot down any tasks that come to mind, helping you stay focused.
- Minimise distractions by leveraging the Zeigarnik Effect, which encourages completing tasks once started. Consider listening to nice music or beta/gamma beats to enhance concentration. Lastly, approach your deep work with a positive mindset, free from distractions, and ready to fully engage.

Digital environment

Eliminate distractions to maintain focus.

- Turn off all notifications, switch your devices to flight mode, and use software that doesn't interrupt your workflow (e.g., disable notifications in tools like Google Chrome).
- Creating a distraction-free environment is key to staying productive and fully engaged.

Each element listed has a scientific backing. For a full explanation behind them, have a look at our [Productivity Bible](#).

Before your deep work session, we recommend using the flow checklist below to reign in your focus.

Flow Checklist

1

General

- Flight mode on.
- Desktop notifications turned off (especially Slack).
- Phone locked somewhere.
- Clocks away and turned off.
- Water / coffee ready.
- To-do list ready.
- Materials and tasks prepared.
- Gamma beats / flow music on.
- Sitting position corrected.

2

Pre-Flow Task Preparation

- Tasks, goals, and default tasks defined?
- Limited field targeted?
- Goal challenging enough?
- Personal control over the task?

3

During Flow

- Begin with 2–5 minutes of controlled, relaxed breathing.
- Supplement with L-Theanine / GABA if stressed.
- Once distracted, write down a task on the to-do list and refocus.

4

After Flow

Task completed?

- If yes, document time needed for optimisation.
- If no, schedule time for additional flow phase.

Reflect:

- Can I improve my system?
- Which steps can be amended?
